Index to Volume 43 (1995) According to the INCE Classification of Subjects

05.2 Book reviews

Active Sound Absorption. — Claude J. Mazzola, Author; Robert L. Clark, Reviewer; **43**(1), 27.

Collected Papers on Acoustics. — Wallace Clement Sabine, Author; Neil Thompson Shade, Reviewer; **43**(2), 51.

Proceedings of the Wallace Clement Sabine Centennial Symposium. — J. David Quirt, Editor; Neil Thompson Shade, Reviewer; **43**(2), 51.

Occupational Hearing Loss, Second Edition. — Robert T. Sataloff and Joseph Sataloff, Authors; W. Dixon Ward, Reviewer; **43**(3), 83–84.

Computer Program PC-HVAC, Version 3.0 for analysis of sound from heating, ventilating, and air conditioning systems. — Chris Paulhus, Author; Neil Thompson Shade, Reviewer; **43**(5), 181–182.

Handbook of Condenser Microphones, Theory, Calibration, and Measurements. — George S. K. Wong and Tony F. W. Embleton, Editors; Anthony Nash, Reviewer; **43**(6), 217.

11.4 Noise generation by air-moving and distribution devices

The search for simple models to predict fan performance and noise. — Terry Wright; **43**(4), 85–89.

Effects of blade design on centrifugal fan noise and performance. — Leonhard Bommes, Reinhard Grundmann, Klaus Klaes, and Carl Kramer; **43**(4), 91–101.

Design of low-noise centrifugal blowers–Part 1: Measurement and analysis procedures. — Peter Konieczny and J. Stuart Bolton; **43**(4), 103–116.

Design of low-noise centrifugal blowers–Part 2: Optimization study. — Peter Konieczny and J. Stuart Bolton; **43**(4), 117–127.

Free-field sound power levels of open-inlet/open-outlet fans and comparisons with in-duct measurements. — Wolfgang Neise, Fredi Holste, Leonardo Miranda, and Michael Herrmann; **43**(4), 129–143.

11.5 Automotive alternators

Aerodynamically-induced noise in an automotive alternator. — Dean M. Frederick and Gerald C. Lauchle; **43**(2), 29–37.

37.1 Sound attenuation in lined ducts

Parallel-element liner impedances for improved absorption of broadband sound in ducts. — Tony L. Parrott and Michael G. Jones; **43**(6), 183–195.

63.1 Psychological effects of noise: Perceived noisiness and annoyance

Annoyance of idling diesel engine noise evaluated by multivariate analysis. — M. Shafiquzzaman Khan, Örjan Johansson, Walter Lindberg, and Ulrik Sundbäck; **43**(6), 197–207.

66.1 Community reaction to noise

Technical Note: On the comparability of community responses to noise from artillery and rifle ranges, as determined in two Australian studies. — Joos Vos; **43**(2), 39–41.

69.1 Criteria and rating of noise for acceptable levels in rooms

Sound quality considerations in rating noise from heating, ventilating, and air-conditioning (HVAC) systems in buildings. — Warren E. Blazier, Jr.; **43**(3), 53–63.

Review and revision of room noise criteria. — Howard F. Kingsbury; **43**(3), 65–72.

69.3 Criteria and rating of noise for annoyance

Human and community response to mililtary sounds — Part 2: Results from field-aboratory tests of sounds of small arms, 25-mm cannons, helicopters, and blasts. — Paul D. Schomer and L. Ray Wagner; **43**(1), 1–13.

71 Instruments for sound and vibration measurement

Compact multichannel controller for active noise and vibration control. — Gérard Mangiante and Alain Roure; **43**(2), 43–50.

71.1.9 Sensors

Technical Note: Shaped polyvinylidene fluoride (PVDF) sensors for intelligent measurement of plane-wave acoustic pressure in liquid-filled pipes. — Thomas J. Royston; **43**(1), 15–20.

74.3.1 Processing of microphone array signals

Digital signal analysis parameters and background noise removal in determinations of narrowband aircraft noise spectra. — Jeffrey J. Kelly and Mark R. Wilson; **43**(1), 21–26.

76.1.1.3 Noise levels in communities around airports

Impact of diversity in aircraft noise ratings. — Willem M. Schuller, Fokke D. van der Ploeg, and Peter Bouter; **43**(6), 209–215.

76.9 Modeling, prediction, and simulation methods

Application of a component mobility modeling technique to automotive suspension systems. — Scott D. Ochsner and Robert J. Bernhard; **43**(3), 73–82.
